FORTA®
CURE-PRO™
STRONGER LASTING™

CURE-PRO™
CURE & SEAL

A modified acrylic polymer specifically designed for the protection and appearance of concrete. It can be used as both a cure and seal for finished concrete as well as a sealer for cured concrete.

LONGER LASTING PROTECTION

A PREMIUM PRODUCT

CURE-PRO gives a non-yellow, clear surface to a wide variety of concrete applications to protect the durability and appearance. With CURE-PRO you are able to achieve better performing concrete.

ADDED DURABILITY

Specially formulated to add protection while keeping the natural luster of the surface, CURE-PRO can be used as both a cure & seal for new concrete surfaces and a sealer for cured, older concrete surfaces. Either way, our product protects against traffic, weather, de-icing salts, oil/gasoline spills, and much more.

WHAT MAKES US STAND OUT?

VERSITILE - One product serves as both a cure and seal as well as a sealer for all finishes of concrete.

EASY TO APPLY - Gives concrete surfaces a truly natural appearance that is easy to apply in just one coat when using as a sealer.

INTEGRITY - Minimal darkening is observed, will not yellow or discolor over time.

SUPERIOR PERFORMANCE - Will not whiten in damp conditions, a problem with many competitive sealers.

LONG LASTING - Outstanding adhesion and durability.

PROVEN PERFORMANCE

While competitor products can lead to unsightly whitening, CURE-PRO protects and penetrates without whitening.
