

MAUMEE STORAGE FACILITY - MAUMEE, OHIO

PROJECT DESCRIPTION

The city of Maumee, OH was looking to add on to their existing facility and were in need of expanding their parking area as well as creating new areas for their equipment to drive on. Originally, wire mesh was looked at as the secondary reinforcement for the concrete slab, but the contractor had positive experiences with the use of FORTA-FERRO[®] and recommended the synthetic macro fiber be examined as an alternate reinforcement. After learning of the added benefits to the use of FORTA-FERRO[®] such as, **impact resistance, abrasion resistance and added toughness**, the city of Maumee chose to go with FORTA-FERRO[®] at 5.0 lbs. / cu. yd. to replace the wire mesh. The FORTA-FERRO[®] **mixed uniformly and placed as expected.** The contractor experienced no issues with brooming the surface to add texture to the surface, resulting in an **excellent broom finish.**

KEY POINTS

- Superior Strength
- Mixed Uniformly
- Excellent Finish

DETAILS

Date: September 2014

Location: Maumee, OH

Dosage: 5.0 lbs. / cu. yd.

Fiber: FORTA-FERRO[®] 2-1/4"

Owner Type: Individual

Application: Pavement
