

## LDS CHURCH MEETING HOUSE - NIBLEY, UT

### PROJECT DESCRIPTION

LDS Church chose to use FORTA-FERRO<sup>®</sup> to reinforce their large meeting house floor slab as a **“cost-controlling and premium performance floor system”**. Previous floor design containing rebar had been less successful when investigated because owners wanted a better way to **control shrinkage and temperature related cracking**. Project specifiers decided that FORTA-FERRO<sup>®</sup> would be the ideal reinforcement method to **address the cracking issues**. The project owners were also pleased with how **easy the fiber was to mix, place and finish** in addition to **cutting overall project costs**.

### KEY POINTS

- Reduced Cracking
- Reduced Shrinkage
- Reduced Costs

### DETAILS

**Date:** June 2011

**Location:** Nibley, UT

**Dosage:** 7.5 lbs. / cu. yd.

**Fiber:** FORTA-FERRO<sup>®</sup> 2-1/4"

**Application:** Slab-on-Ground
