

BUSCHKE DAIRY - WAUPACA, WI

PROJECT DESCRIPTION

Three-dimensional reinforcement throughout the slab as well as acid resistance are two of the many benefits of FORTA-FERRO[®] in slab-on-ground applications for dairy farms. Fiber reinforcement also **eliminates the difficulties that can occur when there is rainfall between the placement of rebar and the concrete pour.** Using FORTA-FERRO[®] fibers allows the owner to leave the entire manure storage facility open, with no obstructions, right up to the time of the concrete placement. Several follow-up visits, the last being in August 2013, indicate that FORTA-FERRO[®] are serving the application very well.

UPDATE

After several follow-up visits, the project has been seen to be holding up successfully. The last follow-up was in August 2013, and indicated that FORTA-FERRO[®] is still serving the application very well.

KEY POINTS

- Reduced Cracking
- Improved Joint Spacing
- Acid Resistance

DETAILS

Date: September 2012

Location: Waupaca, WI

Dosage: 7.5 lbs. / cu. yd.

Fiber: FORTA-FERRO[®] 2-1/4"

Application: Slab-on-Ground
