

GREAT WOLF LODGE - SCOTTSDALE, AZ

PROJECT DESCRIPTION

The Great Wolf Lodge, an indoor water park with slides, raft rides, activity pools, and splash pads, chose fiber reinforcement for their park in Scottsdale, AZ. The 27,000 sq ft slab-on-ground application will be laid in a fiber dosage of 4.0 lb/ cu yd which will house a ropes course, miniature golf, an arcade, and live action game. Fiber was specified for this project, so the contractor chose FORTA-FERRO macro synthetic fibers for the **superior finish value**. Having a smooth, superior finished floor that is **crack free** is important to achieve a level putting area and interactive floor. In addition, the fiber reinforced concrete can be pumped into the area. **No steel reinforcements** are required to be placed, **saving the whole project a lot of time and money**.

KEY POINTS

- Reduced Shrinkage Cracking
- Superior Finish
- Cost Savings
