

## SPARKLES ROLLER RINK - MARIETTA, GA

### PROJECT DESCRIPTION

The Sparkles Roller Rink required a repair solution for their cracked and deteriorated roller-skating floor surface. Due to previous positive experience with FORTA-FERRO®, the contractor suggested the three-dimensional fiber alternate as the best opportunity to approach a joint and crack-free surface on this very large floor. **FORTA-FERRO® was used in this 4" thick topping, and offered no placement difficulties or surface blemishes in this laser-screed and machine troweled finish.**

### UPDATE

The FORTA-FERRO® reinforced floor achieved super-flat caliber results, and was crack-free when surveyed in 2009. The Sparkles Roller Rink repair project also received the **2004 Award of Excellence in the Restoration Category by the Georgia Chapter of the American Concrete Institute.**

### KEY POINTS

- Superior Finish
- Reduced Cracking
- Cost Effective

### DETAILS

**Date:** 2004

**Location:** Marietta, GA

**Dosage:** 7.5 lbs. / cu. yd.

**Fiber:** FORTA-FERRO® 2-¼"

**Owner Type:** Commercial
