

## JJ DRIVE WAREHOUSE - GREENSBORO, NC

### PROJECT DESCRIPTION

FORTA team members worked with Triad Design to design this 750,000 sq ft. warehouse floor based on owners' criteria. Triad Design normally use rebar or wire mesh. However, **FORTA-FERRO** provides a **faster start and finish** because of the scarcity of wire mesh. The owner could **start on their schedule**, not the wire mesh mill schedule. This project, for one of the largest developers in Greensboro, worked in conjunction with a high profile concrete finisher and ready-mix company.

### KEY POINTS

- Increased Durability
- Improved Worksite Safety
- Saved Time & Money

### DETAILS

**Date:** 2021

**Location:** Greensboro, NC

**Dosage:** 3.0 lb/cu yd

**Fiber:** FORTA-FERRO® 2-1/4"
