

ZEKA FLOUR - HOPWOOD, PA

PROJECT DESCRIPTION

FORTA-FERRO macro synthetic fibers were used in place of wire mesh to reinforce the warehouse floor in the new Zeka Flour production plant in Hopwood, PA. A dosage of 4.0 lb/cu yd was used in this 700 yd construction. Using fibers allowed for a **quicker scheduled turnaround time** since contractors did not have to take time to lay and place mesh reinforcements. Using FORTA-FERRO fibers also **lowered the overall cost of the project**. This was the contractors first time using fibers and he is now a big supporter of FORTA-FERRO.

KEY POINTS

- Saved Time
- Reduced Costs
- Increased Durability

DETAILS

Date: April 2019

Location: Hopwood, PA

Dosage: 4.0 lb/cu yd

Fiber: FORTA-FERRO® 2-1/4"
