

## SHOP ADDITION - MOXEE, WA

### PROJECT DESCRIPTION

Poppoff, Inc., a concrete contracting company, utilized FORTA-FERRO® to reinforce a 6" slab-on-ground application for their shop addition. FORTA-FERRO® **aided in crack control and also helped to reduce slab curling.** The first project pour contained two saw cuts and the second pour, around the center support columns, contained no joints. The fiber showed no issues distributing into the mix **leading to a smooth finish.** Due to the success of the project, **owners decided to utilize FORTA-FERRO® as their reinforcement method for their concrete projects going forward.**

### KEY POINTS

- Uniform Mixing
- Reduced Cracking
- Reduced Curling
