Application: Pavement

Dosage: 7.5 lb/cu yd

Total Project Size: 230,000 sq. ft.

Delivery Method: Conveyed

Finish Method: Heavy Broomed

Blue Royal Dairy Farms poured a new feed storage slab in Reedsville, WI. The contractor, St. Louis Construction, sees the benefits with fiber reinforcement in large agricultural projects. The original design called for #5 Rebar 10" on center, but with labor shortages and material delays, a conversion to **FORTA-FERRO** was the clear choice. Using macro synthetic fibers was extremely efficient and beneficial for all involved. It helped keep the project on schedule, and provided cost savings over the originally-specified rebar.
